Rectangular graduated HDPE bottle with wide mouth 250 ml

with screw cap and undercap

Translucent rectangular wide mouth bottles with cap and undercap, **body made of HDPE, cap made of PP.**

Ideal for containing liquid or solid samples, liquids even with medium-high viscosity and pasty or granular materials.

The rectangular shape makes them particularly suitable for storage, thanks to their small footprint. They are therefore useful for storing samples with minimum space consumption.

The threads of the bottle neck and the cap, particularly deep, as well as the forcing ring at the base of the neck, guarantee an optimal seal.

The holes at the base of the neck and on the cap allow the possible application of safety seals or tags.

The quality of the particularly accurate graduation and the semitransparent walls of uniform dimensions, allow the clear and precise reading of the content.

The filling operations are made simple by the adequate dimensional proportion of the diameter of the mouth and the volume of the bottle.

The conformation of the bottom offers greater stability during the filling phases.

Packaged in sturdy cardboard boxes and sub-packaged in practical plastic bags, against any dust deposits.

SUITABLE FOR FOOD CONTACT ACCORDING TO THE FOLLOWING REGULATIONS:

EC Directive 10/2011

Italian Ministerial Decree 21/03/1973 and subsequent amendments

Italian Presidential Decree 777/82 and subsequent updates
