

3.3 DURAN BOROSILICATE glass flasks - cap. ml 100

flat bottom - cone NS 29-32

Laboratory flasks are vessels used in chemistry for distillation and as containers in which to perform reactions.

They are also used to collect substances in a gaseous state, thanks to their shape which better withstands pressure.

Flasks with flat bottom in borosilicate glass 3.3 DURAN

Produced from original DURAN hose

Excellent chemical resistance

Minimum thermal expansion

High resistance to thermal shocks.

On request executions with other capacities / other NS cones
