

MINGOTEST® Disposable IVD container for urine collection

The MINGOTEST® system, patented and with registered trademark, guarantees the patient the collection of the right amount of urine in a hygienic and correct way.

The system consists of an anatomically formed and easy-to-grip filling tank, a test tube complete with screw cap and a patented label.

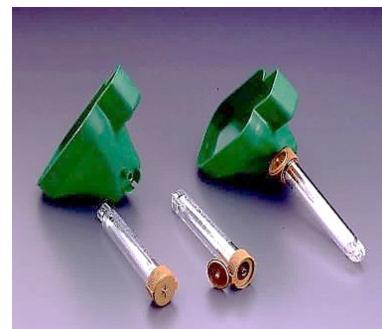

The cap that closes the tube is equipped with an anti-reflux valve that doses the amount of urine that enters the tube from the tray.

The laboratory technician thus receives the urine already in the test tube avoiding manipulation.

The test tube, prepared for placing in the centrifuge, has a well for the collection of sediments.

The whole system is supplied in a single package.

Pack of 160 pieces

Technical data

Tray in PP OMPO Novolen 1100 Lx Basf, green color.
114mm width, 60mm length and 90mm height.

PS polystyrene test tube transparent Basf crystal diam 17-18 mm, overall height 105 mm

PE bag.
