

12 Well Multiwell Cell Culture Plate - Flat Bottom

Pyrogen levels <0.06 EU / ml

Absence of heavy metals, DNA / RNA, ATP, BSE / TSE, DNase / RNase, cytotoxic agents.

The lid with an air ventilation system ensures a controlled gas exchange with low evaporation

A yellow stripe (marking area) positioned on one side of the lid ensures the correct orientation of the same on the plate which also has this marking area in the same direction.

The presence of a rough area determines a better grip of the plate.

Clear alphanumeric numbering in bold black allows not to make pit errors and at the same time a correct orientation of the plate.

Growth area only in the spherical zone.

Absolutely flat bonding surface.

Stackable

Vents in the base of the plate help prevent condensation and provide constant airflow between stacked plates.

Crystal clear transparency

2 available geometries: flat base (F-base) and round base (U-base type).

With lid, single pack

Pack of 126 pieces
