

Filtertop - upper filtering part ml 150

Pyrogen / Endotoxin levels <0.06 EU / ml Absence of heavy metals, DNA / RNA, DNase, RNase, ATP, BSE / TSE, cytotoxic agents. Large square filter area of 49 cm² and 69 cm² (20% larger than similar volume units with circular membranes) Both the filter top and the collection vessel / bottle are graduated Premium PES membrane filter, 0.22 micron pore size The upper part (filtering) is characterized by a GL45 neck, which can be screwed onto bottles with this thread. The square shape of the system ensures that it cannot be "overturned" during filtration under the action of vacuum and is "space-saving" by fitting better inside refrigerators and / or on work benches, occupying less space than similar ones systems characterized by cylindrical bottles. The tapered shape of the neck allows large and small hands a firm and valid non-slip grip even with the use of gloves.

Range of systems from 150 ml up to 1 liter, with the possibility of purchasing the complete system, only the upper filtering parts and / or only the sterile bottles with screw cap.
