

Universal test tube holder in PP 40 places diam. 20 mm

Large capacity modular supports, autoclavable up to + 121 ° C for 20 minutes.

They can be used dry or in a bain-marie without danger of floating.

Their geometry and design do not create obstacles to the circulation of the liquid, so as to ensure the same temperature for all tubes.

They can be placed in the freezer without deforming or becoming fragile; they do not rust and do not deform.

The upper surface is equipped with an alphanumeric embossed grid, which allows an easy and immediate identification of the samples.

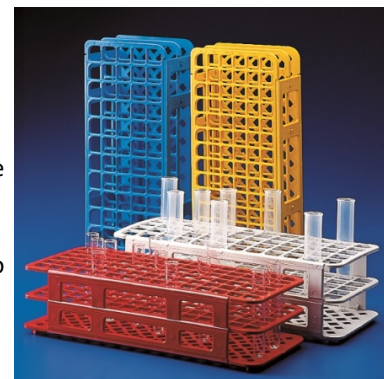

The colors also allow for foolproof coding of sample batches that are sent to the laboratory.

When empty they can be stacked for reasons of order and space.

Available colours:

- White (03)
- Blue (04)
- Yellow (06)
- Red (10)

Pack of 20 pieces
