

Tips 2 - 300 ul

bag of 1000 pieces

Our tips for micropipettes are tapered standardized on the main brands on the market, with accurate cone geometry to ensure optimal adaptation. CE marked products (IVD).

Made with high quality cadmium-free virgin polypropylene granules, they offer a water-repellent surface with very low retention and optimal flow on the tip opening.

They are available loose in polyethylene bags of 1000 pieces or placed in refill plates of 96 pieces, to be used together with the boxes with lid (possibly suitable for autoclaving also by assembling the plate complete with tips inside the same boxes with lid), or still in complete pre-assembled racks (possibly also sterilized by irradiation).

The boxes, supplied with a separate code, can be in PP (polypropylene, autoclavable at 121 ° C max), or in PC (polycarbonate, able to withstand temperatures up to 135-140 ° C).

The tips and plates are in PP polypropylene autoclavable at 121 ° C.
