

Universal filter tips 20 - 300 ul

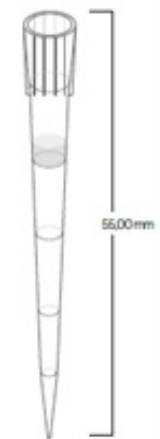

96 pieces rack STERILE in PP box with lid

This filter tips for micropipettes (filtertips) are standardized on the main brands on the market, with accurate cone geometry to ensure optimal fit. Made of clear medical grade virgin polypropylene with low liquid retention

Guaranteed free from DNase, RNase, Cadmium and Metal free Gamma ray sterilized. Ideal for use in molecular biology, cell culture, bacteriology, virology, immunology and radioimmunology.

The hydrophobic "Porex" polyethylene filters used act as a barrier against aerosols and fluids, avoiding cross-contamination of the samples and the micropipette. The porosity of the filters is such as to guarantee, in the event of excessive suction, the complete emptying of the tip. Packaging in rack with hermetically sealed lid with shrink wrap (possibly reusable with non-sterile refill tips).
