

Roller stirrer for hematology mod. RM10 - 4-30 rpm

adjustable speed - removable rollers

Roller stirrer equipped with rotating PVC rollers that provide gentle and uniform mixing.

The movement of the rollers is rotating and oscillating, thanks to the eccentric fixing pins of the same.

The containers are positioned horizontally on the surface of the oscillating rollers.

Distance between rollers 40 mm.

This type of stirrer is particularly suitable for uniform mixing of blood samples for laboratory tests, for haematological determinations and other cell suspension samples.

It also prevents sedimentation in samples such as dyes, paints, oils and cosmetics, etc.

The rollers, in the models where they are removable, allow the placement of bottles with a capacity of up to 5 liters.

The rotation motor is powered at low voltage (24 VDC)

Protection class (DIN EN 60529) IP32
