

Centrifuge tubes with conical bottom, in PP, ml 1,5 Eppendorf type

with pressure cap bound flat with pierceable septum, writing area on the cap

Eppendorf-type microtubes made of transparent neutral-colored PP polypropylene.

Flat bound pressure cap with satin area for writing, for easy identification of the sample, and central pierceable septum diam. about 3 mm

They can be used in suitable centrifuges up to RCF max 21,100

(This value is indicative as the data is largely influenced by various conditions, such as: the conformation of the centrifuge rotor, the arrangement of the tubes inside the rotor, the chemicals used, the temperature and the centrifugation time)

Can be sterilized in an autoclave at + 121 ° C for 20 minutes, with the cap open.

Available on request in the colors:

- 04 blue
- 06 yellow
- 12 green
- 13 pink

Pack of 1000 pieces

Packaging 10 packs. from 1000 pieces
