

Bag for blood components 360 x 190 x 260 mm

Secondary container

Bags designed and manufactured for the transport of whole and processed blood bags characterized by:

- a double safety hermetic closure which ensures, with absolute certainty, the non-leakage of any biological liquid;
- transparent material that allows the constant visualization of the internal contents allowing the operator to monitor any breakages of blood bags;
- very resistant material that ensures a certain strength to shocks and falls and therefore to possible breakages.

Transport by insertion in a blood transport bag (codes 04306750 , 04306751 and 04306752).

Material: transparent cristal mate 50 thickness um 400
