Temperature stabilizer at -30 ° C orange

The transport of blood components must be carried out at constant temperatures.

Temperature stabilizers allow for safer temperature maintenance during transport.

These stabilizers have the property of constantly releasing the temperature for which the liquid inside them was designed.

The destination is that of products suitable for the transport of containers containing biological material of type UN 3373 (Biological matter, Category B).
Store in a dry place, Temperature min -10 ° C max + 50 ° C
Dimensions: 220 x 120 mm, thickness 11 mm
170 ml capacity
Weight 0.3 Kg
