BOROSILICATE glass flasks 3.3 DURAN - cap. 2000 ml

with spherical bottom - cone NS 29-32

Laboratory flasks are vessels used in chemistry for distillation and as containers in which to perform reactions.

They are also used to collect substances in a gaseous state, thanks to their shape which better withstands pressure.

Round bottom flasks in borosilicate glass 3.3 DURAN

Produced from original DURAN hose

Excellent chemical resistance

Minimum thermal expansion

High resistance to thermal shocks.

On request executions with other capacities / other NS cones

Code	Description	NS cone	Capacity ml	Pieces per pack.
