

## Cellulose nitrate filter membranes diam. mm 47 por. 1.2

### white - not sterile

Cellulose nitrate membranes are useful for microscopic particle analysis and for most routine applications.

Ideal for sample preparation, microbiological studies and filtration of aqueous solutions.

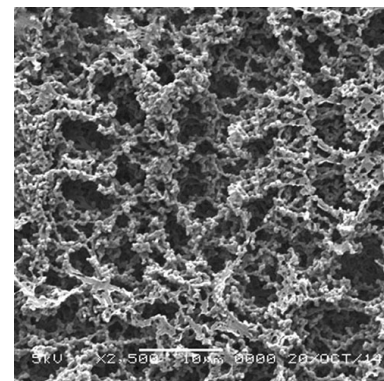

Typical applications:  
 aqueous filtration, sterility test, gravimetric analysis with the incineration technique, microbiological and particulate analysis.

Autoclavable at 121 ° C.

Hydrophilic  
 Packs of 100 flat discs.

Membranes with different porosities and diameters are available on request:

- black in color, for applications on food and beverages
- with and without reticle (reticle size 3.1 x 3.1 mm),
- sterile (in single pack)

| Code     | Description   | Diam.mm | Porosity um | Pieces per pack. |
