

Sterile cellulose nitrate filter membranes with grating diam. 50 porosity 0.2 um

white - sterile - with lattice

Cellulose nitrate membranes are useful for microscopic particle analysis and for most routine applications.

The 3.1 x 3.1 mm lattice facilitates the counting of particles, microorganisms and colonies.

Ideal for sample preparation, microbiological studies and filtration of aqueous solutions.

Autoclavable at 121 ° C.

Sterile, in single pack of 100 pieces

Hydrophilic

Membranes with different porosities and diameters are available on request:

- white sterile without lattice
- sterile black with lattice

Code	Description	Diam.mm	Porosity um	Pieces per pack.
