

PTFE watch glasses diam. 50 mm

Containers made of PTFE, with a slightly concave circular shape, used in chemistry to evaporate a liquid or weigh small quantities of solids.

When used as an evaporation surface, they allow observation of crystallization or precipitation and can also be used as lids for PTFE beakers.

Exceptional chemical and thermal resistance.

They can be used continuously at temperatures up to + 250 ° C.

Suitable for food contact

Pack of 2 pieces
