

Whatman 1 Chr

1 Chr

Whatman chromatography paper is by far the most widely used worldwide.

This level of acceptance and use reflects the purity, as well as the consistently high quality of Whatman papers.

These are the characteristics that analysts rely on and which are essential for obtaining effective and reproducible chromatographies.

The material of the Whatman chromatography papers consists of carefully selected cotton cellulose.

Quality controls on chromatographic characteristics are rigorous and also ensure consistency within each grade.

Packs of 100 sheets.

1 Chr

The world standard of chromatography papers.

It has a smooth surface, 0.18mm thick and a linear flow rate (water) of 130mm / 30min.

Good resolution for general analytical separations.
