

## Sterile disposable syringes without needle cap. 20 ml - central Luer Lock cone

### 3 pieces

The wide range of capacities of this series of sterile plastic syringes meet the needs of safety and precision even in the case of high volumes to inject.

The 20 and 50/60 ml syringes are also available on request in the amber version, to guarantee the protection of light-sensitive drugs.

The 100 ml syringe is supplied with a removable Luer adapter, inserted in the shaft.

#### General Syringe Specifications

Sterile medical device, single use.

The transparency of the cylinder allows the control of the mixing, the possible presence of air bubbles and a correct dosage.

The graduated scale is printed in black ink to make it easier to read.

The use of medical grade silicone ensures smooth and safe sliding of the piston.

The handle according to EN ISO 7886-1 allows for easy handling.

Luer and Luer Lock connections comply with the requirements of EN ISO 80369-7.

#### Different connections:

Central or Eccentric Luer Cone

Cone Luer Lock provides tight and reliable connections.

Cone Catheter allows the connection of tubes.

#### Component Specifications

Cylinder: clear polypropylene with plunger retention ring.

Rod: opaque polypropylene.

Piston: non-toxic synthetic rubber, with two sealing rings.

Luer adapter (100ml capacity only): transparent polypropylene.

Lubricant: silicone for medical use.

Graduation scale: according to EN ISO 7886-1.

Blister (sterile barrier system): medical paper - plastic film.

#### Method of sterilization

10% ethylene oxide + 90% CO<sub>2</sub>; cycle validated according to EN ISO 11135.

#### Medical Device with CE mark.

Cod. CND A020102010202
