

Strips of 8 PCR tubes ml 0,2 white

The 8 tube PCR stripes offer a flexible solution for your PCR or qPCR with medium sample volumes.

Domed caps for extra sealing pressure via thermal cycler lid or flat caps required for qPCR.

The cap stripes can be easily opened and closed with one hand, while the separate cap and film stripes are particularly suitable for automation, as they do not hinder robotics.

No matter which cap you choose: all variants seal vessels reliably, effectively protecting your samples from evaporation and contamination.

The stripes are free of DNase, DNA, RNase and endotoxins as they are produced under controlled clean room conditions. This ensures reliable and reproducible results.

The extra-thin walls allow for even heat transfer during the heating and cooling process for short cycle times.

Pack of 125 stripes (for a total of 1000 tubes or caps)

Code	Description	Capacity ml	Type of cap	Color	Pieces per pack.
53781325	Strips of 8 PCR tubes ml 0,2 white	0.2	without cap	white	125 strips of 8 pcs.
