PCR strips of 8 tubes with attached flat individual capse

1 connector

The 8 tube PCR stripees offer a flexible solution for your PCR or qPCR with medium sample volumes.

Caps are flat and individually attached, ideal protection against contamination.

The highly transparent caps make this product ideal for Real Time PCR.

Thanks to a single connector, these stripes can easily be shortened in length.

The stripes are free of DNase, DNA, RNase and endotoxins as they are produced under controlled clean room conditions. This ensures reliable and reproducible results.

The extra-thin walls allow for even heat transfer during the heating and cooling process for short cycle times.

Also available on request in the Low profile version of 0.15 ml

Pack of 120 stripes (for a total of 960 tubes)

Code	Description	Capacity ml	Type of cap	Color	Pieces per pack.
