

PCR plates 24-well, non-skirted ml 0,2 clear

With 24- or 48-well PCR plates, average sample volumes can be easily handled.

The compact format works with all common thermal cyclers and offers easy handling.

To avoid well-to-well cross-contamination, the edges of the wells are raised slightly so that reliable results are always obtained.

The thin tank walls ensure rapid temperature transfer for short cycle times.

The clean room quality of PCR consumables ensures reliable results.

They are free of DNase, DNA, RNase and endotoxins.

Pack of 40 plates of 24 wells (in bags of 5 pieces)

Pack of 20 plates of 48 wells (in bags of 5 pieces)
