

## Cassettes for histological inclusions with rectangular grid

### Green

Universal type cassettes for histological inclusions in paraffin, made of POM.

Equipped with a bound lid with double-click closure, which can be removed, with automatic break during the closing phase.

Ideal for processing, embedding and sectioning procedures.

Drain windows optimize circulation and liquid exchange, ensuring effective drainage.

The inclined writing surface allows sample identification during the embedding process.

The lid lifting tab is located on the side.

White color

Available in different colors:

CE - IVD mark

Pack of 500 pieces

Multipack: 4 for 500
