

## Triple scale Mod. 104 for Honey

### Triple scale

The refractometer is an instrument that uses the Brix (%) scale and shows the percentage of soluble solids content of a sample as an aqueous solution.

The refractive index of a liquid containing sugar or other solids is proportional to its concentration.

Hand refractometers are based on this principle. They are in fact built to measure, quickly and easily, the percentage of sugar present in liquids.

They are therefore useful in various fields: in industries for quality control of the raw materials used and of the final product for fruit, honey, drinks, juices, etc. For wine producers, cellars, analysis laboratories.

**With the refractometer mod. 104 with triple scale, with a single model you can carry out two checks on honey: % sugar and water content.**

### Characteristics Mod. 104 Triple scale refractometer

<b>Be accuracy</b>	<b>±0.5</b>
<b>Brix accuracy</b>	<b>±0,5 %</b>
Dimensions (L x P x A)	170 x 45 x 45 mm
Weight	0.15 kg
<b>Be measuring range</b>	<b>38 ... 43</b>
<b>Water measuring range</b>	<b>12 ... 27</b>
<b>Brix measuring range</b>	<b>58 ... 92 % Brix</b>
Risoluzione Brix	0.5 %

<b>Code</b>	<b>Description</b>
<b>B4430043</b>	Triple scale Mod. 104 for Honey Triple scale
