

Conductivity calibration solution according to EN 10204

ref. temp. + 25°C - 147 µS/cm - 250 ml

Conductivity calibration solution according to EN 10204.

Conductive solutions are used for the calibration of most conductivity instruments.

To calibrate an instrument, choose a conductive solution closest to the measurement range and calibrate the instrument for optimal system accuracy.

Available with different ranges

Available in different formats

Calibration certificate is available on request
