

Conductivity calibration solution according to ISO 17025

ref. temperature + 25°C - 1413 μ S/cm - 500ml

Conductivity calibration solution according to ISO 17025.

Conductive solutions are used for the calibration of most conductivity instruments.

To calibrate an instrument, choose a conductive solution closest to the measurement range and calibrate the instrument for optimal system accuracy.

Available with different ranges

Accuracy	± 1 %
Certificate	Yes
Color	Colorless
Composition	Potassium chloride in aqueous solution
Packaging	500 ml with integrated calibration compartment
Description	DFM Accuracy ±1%

With calibration certificate

Code	Description	conductivity at 25°C	Quantity ml
7506131	Conductivity calibration solution according to ISO 17025	1413 μ S/cm	500
