

## Glass fiber filters type 8837

### rapid filtration - Ø 125 mm

Fiberglass filters are made of 100% borosilicate glass microfibers, without binders.

Highly resistant paper that combines the recovery of fine particles with a good filtration speed.

These filters allow for rapid filtration, high particle retention and use at very high temperatures (380°C).

They are suitable for microfiltration and have chemical compatibility with most solvents and reagents.

No sterile Other formats on request.

Available in packs of 100 flat discs.
