Sterile PS soft ring ul 10 + ball

Single pack

Microbiological inoculation loops, sterile by irradiation, with ring (capacity 1 or 10 ul) and needle for inoculation at the other end.

They guarantee multiple advantages: flame sterilization is avoided, time is saved.

Cross-contamination and the formation of dangerous aerosols are avoided.

They do not plow the nutrient soil as is often the case with metal loops.

Made of shockproof PS.

CE IVD marking
CND W05030302
