

Established in 1960, the Company works in two main activity fields:

equipment construction and technical assistance

- equipment for biological, chemical and industrial laboratories for thermal treatments (thermostatic water baths, thermostatic ovens, thermostatic incubators, water distillers), with possible on demand productions;
- Technical Assistance, during the warranty period and after, provided by a manufacturing Company, with the experience and the spare parts availability of a producer, both with regard to its own production than to the instruments distribution line.

distribution of consumables and laboratory equipment

disposable plastic products, glassware, general laboratory consumables, chemical and microbiological reagents, general basic instrumentation for chemical and microbiological laboratories with large inventory stock for a ready delivery service

Our production program, focused on thermal control instruments, ranges from thermostatic ovens to incubators, from refrigerated incubators to thermostatic water baths and water distillers.

Only the best raw materials are used for our products; we exclusively employ stainless steel for the construction of both external than internal parts of our equipments.

For this range of products we are able to produce customized productions and/or on specific customer's dimensions.

Our thermostatic water baths can be used for a variety of applications, as incubations with precision thermostatic control, precision immersion tests on samples, for quick and uniform heating samples or more.

Available in 4 sizes, with a net capacity of 7 to 48 liters

Our refrigerated incubators can be used for many applications such as microbiological incubations, material testing, biological or other environmental testing at ambient temperatures or similar values, etc.

Available as standard with capacity from 120 to 700 liters

The thermostatic ovens of our production can be used for many applications such as for dry sterilization cycles, material tests, or any other work demanding uniform and accurate heating control within the temperature's range

Available as standard with capacity from 20 to 760 liters.

We produce ovens on special measures and/or on Customer demand and for continuous work from 250 to 350°C.

Our incubators can be used for many applications such as microbiological incubations, material tests, or jobs requiring uniform and accurate heating control within

the temperature's range.

Available as standard with capacity from 20 to 760 liters

Our distillers are designed for the production of distilled steam condensation water by heating.

For this purpose, armored resistors are fully immersed in water during the operating cycle.

Production of 5 or 10 liters / hour
